
REPORT TO THE LEGISLATURE

Levels of Nonnutritive Substances in Fertilizers

(As required by RCW 15.54.433)

Prepared by the Washington State Department of Agriculture (WSDA)
and the Washington State Department of Ecology (Ecology)
December 2003

Introduction

On March 18, 1998, the Fertilizer Regulatory Act of 1998 was signed into law. The primary purpose of the Act was to better protect human health and the environment by creating a regulatory standard for nine metals that are sometimes found in commercial fertilizers. This is the third biennial report to the legislature on the levels of nonnutritive substances in fertilizers required by the Act.

Current Fertilizer Registration Requirements

As of November 1, 2003, there are 3,651 fertilizers registered for distribution in Washington. As part of the information submitted for registration, the registrant must submit a metals analysis for each of its products. The metals that must be analyzed are: arsenic, cadmium, cobalt, lead, mercury, molybdenum, nickel, selenium, and zinc. Specific preparation and analysis methods are required. The levels reported by the company are compared against the Washington standards for these metals. If the levels exceed the standard for any of the nine metals, the product cannot be registered in Washington.

All micronutrient and waste-derived fertilizers must go through an additional review by the departments of Ecology, Labor and Industries, and Health before they can be registered. Waste-derived fertilizers range from cement kiln dust (used as a liming agent) and electric arc furnace dust (a source of zinc), to animal manure and bone meal.

All fertilizers registered by WSDA meet the Washington standards for metals, with the vast majority meeting the standards by a wide margin. When reviewing new products, WSDA occasionally finds one with metals levels and application rates that cause it to exceed the standards. In most cases, the company is able to address the problem by (1) using different source materials (with lower metals levels) in the product, and/or (2) lowering the rate of application on the label.

Another important aspect of Washington's fertilizer law is the requirement that all fertilizer labels have a statement directing purchasers to the WSDA Web site where they can find information about the metals levels in the product. The metals information is in a database

that includes the product name, the registering company, the nutrient guarantees, and the levels of metals found in the product.

Fertilizer Compliance Activities

WSDA routinely samples a number of fertilizers each year and analyzes them for the nine metals covered by the Washington standards. WSDA is focusing its metals sampling efforts on those fertilizers it believes are most likely to have relatively high metals levels. These include certain phosphate fertilizers, micronutrients, and industrial waste-derived fertilizers.

WSDA also conducts routine inspections of facilities that sell fertilizer. As part of the inspection, officials check fertilizer labels for compliance with the Web site notification requirement. Lack of Web site notification is the most common violation found at retail outlets. When fertilizers are found without the Web site notification language, WSDA issues a stop-sale order and the product is pulled from distribution until the labels are appropriately revised or the product is returned to the supplier.

Metals Content of Registered Fertilizers

Data Gathered from the Registration Process

Appendix A lists the metals data for each fertilizer registered as of November 1, 2003. All products listed in the Appendix meet the Washington Metals Standards, most by a wide margin. The most recent information regarding registered fertilizers and their metals content can be accessed via the Internet at:
<http://agr.wa.gov/PestFert/Fertilizers/ProductDatabase.htm>.

A review of Appendix A shows the metals content varies greatly among registered fertilizers. In some cases, metals concentrations vary by one or even two orders of magnitude. The question which comes to mind is, how can these products all meet the Washington metals standards? The answer lies in the fact that the standards are not based solely on the amount of metals in fertilizers, but rather the amount of metals to be added to soil over time (measured in pounds/acre/year) through the application of the fertilizer. Therefore, a fertilizer that has a high concentration of a particular metal may pass the standards if only a small amount is applied to the soil. Conversely, a fertilizer with low concentrations of metals can be applied at high rates and still pass the standards. The net effect in either case is that regulated metals levels are below the allowable levels as defined under RCW 15.54.800 and WAC 16-200-7064.

Another variation in the metals data occurs with products that contain one or more of the three metals cobalt, molybdenum or zinc. These three metals are essential for plant growth. For example, soils in eastern Washington are low in zinc and applications of zinc-based fertilizers have shown improved crop yields. Many of Washington's fruit, vegetable and row crops receive applications of zinc. When a particular metal such as zinc is used as a plant nutrient, the levels of that metal are allowed to exceed the Washington metals standards. Thus, the high levels of zinc in certain products listed in Appendix A are not cause for concern.

Data Gathered from Field Sampling

WSDA conducts a routine sampling program to monitor fertilizers for their metals content. Appendix B lists all samples analyzed between November 1, 2001 and October 31, 2003. A total of 84 fertilizers were sampled and analyzed. All samples met the Washington standards for all nine metals.

Analysis results of all samples collected since November 1999 can be found on WSDA's Web site at: <http://agr.wa.gov/PestFert/Fertilizers/docs/rptFertHMSampled.pdf>.

Report on the Plant Uptake of Metals from Fertilizers

A report on the plant uptake of metals from fertilizers was published in December 2001 and updated in August 2002. The report summarized a study conducted by the Washington State University titled "Influence of Metal Rates and Forms on Crop Productivity and Metal Uptake in some Washington Soil". A copy of the report is available at: <http://agr.wa.gov/PestFert/Publications/docs/2002MetalsUptakeStudy.pdf>.

Review of Waste-Derived and Micronutrient Fertilizers

State law required that as of July 1, 1999, Ecology must review and approve all registration applications for waste-derived and micronutrient fertilizers (RCW 15.54.330(4)). Appendix C provides a summary of the products that Ecology reviewed for the period July 1, 2002 to June 30, 2003, in fulfillment of that requirement.

To review registration applications for waste-derived and micronutrient fertilizers, Ecology developed a set of criteria that set maximum levels for leachable metals and halogenated organic compounds in fertilizer products. However, products that exceed the maximum allowable levels in these criteria can still pass Ecology's review if it can be conclusively shown that no hazardous wastes are used to manufacture the product. Detailed information on the analytical test results for each fertilizer product reviewed by Ecology can be found on Ecology's Web site at: <http://www.ecy.wa.gov/programs/hwtr/fertilizer/index.html>.

It should be noted that Ecology did not review waste-derived and micronutrient fertilizer registration applications that were determined by WSDA to be unable to meet the Washington Standards for metals. These registration applications were denied by WSDA prior to Ecology's review process.

Summary

The Fertilizer Regulatory Act of 1998 is in its sixth year of implementation. The vast majority of fertilizers continue to pass the Washington metals standards, most by a wide margin.

Other activity regarding standards for metals:

- The Association of American Plant Food Control Officials (AAPFCO) permanently adopted concentration-based standards for the same nine metals covered by the Washington standards. The standards are based on a risk assessment funded by The Fertilizer Institute, and are available as a model for other states to use if they choose to adopt their own standards. AAPFCPO also sponsors a Web site that will link people to states with information about the metals content in fertilizer. Washington, Oregon and California are currently listed on the Web site. The Web site can be found at: <http://www.aapfco.org/metals.htm>.
- EPA has adopted a narrowly focused rule addressing contaminants in waste-derived zinc fertilizers. The rule can be found at: <http://www.epa.gov/epaoswer/hazwaste/recycle/fertiliz/fert-nod.pdf>.

More information on metals in fertilizer, including fact sheets, news releases, studies and publications can be found on WSDA's Web site at:

<http://agr.wa.gov/PestFert/Fertilizers/Metals.htm>
